Notice

The Korean Society of Anesthesiologists www.anesthesia.or.kr
Editorial Board / Tel: +82-2-792-5128 / Fax: +82-2-792-4089 / Email: journal@anesthesia.or.kr

1. On-line manuscript review process

1) All proposed manuscripts for publication in the Korean Journal of Anesthesiology will be processed exclusively online.
Please use the "Questions and Answers" section of our website (http://www.editorialmanager.com/kja) for any concerns you may have vis-á-vis problems, questions, or suggestions for improvement. You may also direct them to the attention of the electronic manuscripts processing manager (editorial manager, +82-2-704-7692).
2) Processing publication-related inquiries for newly submitted manuscripts through the main number of the KJA would cause undue burden for the KJA in its general duties.
As such, these inquiries should be made entirely online in the "Questions & Answers" section of the website. Requests and orders - including the expected date of publication and the status of manuscript under review - should be made online, and responses shall be provided without delay upon confirmation.

2. Information and regulation for submitting manuscripts

1) The corresponding author will be notified by e-mail whenever there is any change in the status of a submitted manuscript.
Authors could also obtain this information directly through the website. The KJA will respond to all review inquiries.
However, the expected Volume and Number cannot be provided, if it has not yet been confirmed; as such, we would not be able to entertain inquiries on this matter.
2) Doctoral and Master's dissertations should abide by the manuscript submission guidelines of the KJA and should accompany a scanned file of the thesis title and the signature(s) of the examiner(s). This information should be entered in the "Paper Information" section during the online submission process.
3) The corresponding author should be a faculty. The corresponding author will be notified by e-mail whenever there is any change in the status of a submitted manuscript, and any resubmission can only be made by the corresponding author.
4) A manuscript needs to be resubmitted if there is a change in the makeup of the manuscript authorship; thus, special care should be taken when registering authors.
5) Manuscript review is terminated after two reviews, but a member of the review committee may request for a 3rd review.

3. Author guidelines update

1) Use of Institutional Email Address: Authors are strongly encouraged to use an official institutional email address during the submission and peer-review process to ensure transparency and academic integrity.
2) AI Use in Manuscript Preparation: Authors must disclose any use of generative artificial intelligence tools (e.g., ChatGPT) in the preparation of the manuscript, in accordance with the journal's updated submission policies on AI-assisted writing.
3) Graphical Abstract Submission: Submission of a graphical abstract is highly encouraged. Graphical abstracts improve the visibility and accessibility of research and facilitate broader dissemination of key findings.

4. Copyright for visual materials

In preparing a submission to the journal, the corresponding author must ensure complete compliance with copyright and permissions requirements for all visual materials. Any photographs, figures, images, illustrations, or other graphic elements included in the manuscript must be supported by documentation confirming the right to use, reproduce, or modify these materials. The corresponding author is responsible for verifying that each item is either original work created by the authors or is used with explicit permission from the rightful copyright holder. A signed permission or copyright-clearing statement for every non-original visual element must be submitted at the time of manuscript submission.

If all included visual materials are entirely original creations of the authors, it is sufficient to state this clearly in the cover letter, and no additional documentation is required. This declaration ensures transparency and allows the editorial office to verify authorship efficiently.

Submissions missing the required copyright documentation may experience administrative delays and will not proceed to peer review until all materials are fully verified. When using materials not created by the authors, appropriate copyright documents—such as a formal permission letter, license agreement, or proof of rights from the original publisher or creator—must be provided. This process upholds ethical publication standards, protects intellectual property, and ensures transparent scholarly communication.

5. Revision of the Instructions for Authors – Figures

The Instructions for Authors have been revised to include additional requirements for figures containing experimental images, such as Western blots and gel electrophoresis images. Authors are now required to submit original, uncropped, and unprocessed images as supplementary files at the time of manuscript submission. Any cropping, splicing, or image adjustments must be clearly disclosed in the figure legends.

Please refer to the revised Instructions for Authors (Section 9. Figures) for further details.
