Editorial
The values shown on optical technology-based patient monitors must be cautiously interpreted: intravenous dye-induced errors

The first step to good clinical research: statistical thinking

Review Article
Transfusion-related acute lung injury; clinical perspectives

Statistical Round
Statistical and methodological considerations for reporting RCTs in medical literature

Clinical Research Articles
Comparison of the rate of successful endotracheal intubation between the "sniffing" and "ramped" positions in patients with an expected difficult intubation – a prospective randomized study

Effects of intravenously administered indocyanine green on near-infrared cerebral oximetry and pulse oximetry readings

The predictive performance of infusion strategy nomogram based on a fluid kinetic model

Comparison of etomidate and propofol on intubating conditions and the onset time associated with cisatracurium administration

Epidural anesthesia for pilonidal sinus surgery: ropivacaine versus levobupivacaine

The optimal anesthetic depth for interventional euroradiology: comparisons between light anesthesia and deep anesthesia

Experimental Research Articles
The time-course and RNA interference of TNF-α, IL-6, and IL-1β expression on neuropathic pain induced by L5 spinal nerve transaction in rats

Expression of the spinal 5-HT7 receptor and p-ERK pathway in the carrageenan inflammatory pain of rats

Case Reports
Malposition of central venous catheter in the jugular venous arch via external jugular vein

Epidural anesthesia for permanent spinal cord stimulation with a cylindrical type lead: a case series

Hydrothorax with alveolar-pleural fistula mimicking re-expansion pulmonary edema during liver transplantation

Acute gastric dilatation causing fatal outcome in a young female with eating disorder

Complete resolution of myoclonus-like involuntary movements under subarachnoid block after midazolam administration in a patient undergoing cesarean section

A sheared Racz catheter in cervical epidural space for thirty months

Letter to the Editor
Anesthesia awareness. Can midazolam attenuate or prevent memory consolidation on intraoperative awakening during general anesthesia without increasing the risk of postoperative delirium?

Corrigendum
