

Supplementary Fig. 2. Changes of leak fraction between the I-gel group and the Baska Mask group. Values are expressed as mean \pm standard deviation. There were no significant differences in leak fraction between the groups. T1: 1 min after induction, T2 : 5 min before CO₂ pneumoperitoneum, T3: 5 min after start of CO₂ pneumoperitoneum, T4: 5 min before removal of pneumoperitoneum, T5: 5 min after removal of pneumoperitoneum.
